Bynum, C. A. General Secretary, Gives Practical Talk to Students

The "Investment of Personality" was the extremely interesting topic of a practical and straightforward talk given by Dr. C. A. Bynum, General Secretary of the Philadelphia College of Osteopathy, to the junior students on Friday, January 6th. Mr. Bynum opened the talk by stating that the hard work and the study done by the osteopathic students of this school was the largest he had ever known about. He suggested that the most important person in osteopathic medicine is the one who can return to the community the best possible care. He explained that osteopaths are and have been interested in the science of the human body from a mechanical standpoint, and, that while the work of the osteopath is much the same as the work of the average physician, it is his job to approach diseased conditions from a different point of view, one which is available to every one of us.

We were reminded that there are three parts to this "Investment of Personality". The first is the attainment of physical and mental health, and the second is the house, the school, the church, and social relationships. The third is the attitude of the individual toward his work. The first two are the factors most difficult to control, but the third is the one which can be changed by the individual himself. Dr. Bynum says: "It is a great deal easier to acquire this thing than it is to maintain it."

The second lecture was given on January 4th, by Dr. Bynum. The lecture was entitled "Bone and Joint Troubles," and was opened with a discussion of the skeleton and the skin. The skin and the skeleton are used to illustrate the importance of the proper functioning of the body in maintaining health.

The third lecture given was on January 5th. He explained the treatment of certain diseases and the way in which they are caused and cured. The treatment of some of the more common diseases was given in detail, and the principles of treatment were illustrated with diagrams.

The fourth lecture given was on January 6th. It was a continuation of the previous lecture, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The fifth lecture given was on January 7th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The sixth lecture given was on January 8th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The seventh lecture given was on January 9th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The eighth lecture given was on January 10th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The ninth lecture given was on January 11th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The tenth lecture given was on January 12th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The eleventh lecture given was on January 13th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twelfth lecture given was on January 14th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The thirteenth lecture given was on January 15th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The fourteenth lecture given was on January 16th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The fifteenth lecture given was on January 17th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The sixteenth lecture given was on January 18th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The seventeenth lecture given was on January 19th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The eighteenth lecture given was on January 20th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The nineteenth lecture given was on January 21st. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twentieth lecture given was on January 22nd. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twenty-first lecture given was on January 23rd. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twenty-second lecture given was on January 24th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twenty-third lecture given was on January 25th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twenty-fourth lecture given was on January 26th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twenty-fifth lecture given was on January 27th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twenty-sixth lecture given was on January 28th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twenty-seventh lecture given was on January 29th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twenty-eighth lecture given was on January 30th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The twenty-ninth lecture given was on January 31st. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The thirty-first lecture given was on February 1st. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The thirty-second lecture given was on February 2nd. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The thirty-third lecture given was on February 3rd. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The thirty-fourth lecture given was on February 4th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The thirty-fifth lecture given was on February 5th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.

The thirty-sixth lecture given was on February 6th. It was a continuation of the previous lectures, and was given by Dr. Bynum. He explained the treatment of some of the more difficult cases, and the principles of treatment were again illustrated with diagrams.
OSTEOPATHIC DIGEST

The Official Publication of the Pennsylvania College of Osteopathy, 19th and Spring Garden Sts., Philadelphia

Vol. 1 January 15, 1928 No. 6

Qualifying Certificates

It is required by law in most States that persons who are to practice osteopathy in that State shall have earned a qualifying certificate from an approved school of that science. This certificate must be issued by the Department of Public Welfare of the State where the school in which the candidate for the certificate is trained is located. A candidate desiring to practice must present his certificate for examination for a license to practice osteopathy from an osteopathic college.

The minimum requirements (which vary from State to State) for the qualification of an approved four-year course in high school or college for the issuance of this certificate are: A candidate must have been graduated from high school or college, or if his high school work has been completed, he must be able to demonstrate his ability to understand and execute the requirements for graduation from an osteopathic college.

It has been the privilege of the

OSTEOPATHIC DIGEST

Appellate Review of the Philadelphia College of Osteopathy will be held in the osteopathic college. Formerly conditioned students in the Philadelphia College of Osteopathy might have had a number of different disadvantages, and an examination given by the Pennsylvania Board of Examiners for Osteopathic Practitioners has been held at the Pennsylvania College of Osteopathy in the spring of 1927. Students attending the Philadelphia College of Osteopathy who have completed the four-year course in high school and have taken the examination for the issuance of this certificate will be considered eligible to practice osteopathy.

is issued on evidence of satisfactory progress in the eight-year high school course. Registration of the Pennsylvania College of Osteopathy will hold the qualification of the New York, Pennsylvania or New Jersey.

OSTEOPATHIC DIGEST

Every day shows an advance in the science of Osteopathy by the public and coincident with that we find modern opinion of osteopathic physiology and anatomy. It is upon which to which I refer at this time. It has been the privilege of the writer to see a number of accident cases and it is on these cases that this article is based. It has always gotten a satisfactory award or settlement. Occasionally, injuries which are not referred to as such by our friends is the "Old School" of Medicine." An answer of the Board of Directors to a complaint has been found in a court in New Jersey. The plain fact that osteopathy is a growing movement is evidenced by a constant increase of interest at a high rate. It is within the reach of the hand. It is read through the laying out and rendering the mechanism of the body’s new wound. It is seen as a wound would; otherwise no external examination is required. Osteopathic consciousness patient complained of several months had been relieved by any form of medical treatment. The diagnosis and location was found. Ten weeks after the accident the patient came gradually worse, was referred to the writer by a family physician. In examination it was found he had very prominent costal margins in the cervical region and superior dorsals.

OSTO
The thyroidea ima is a branch of the external carotid artery, which is in turn a branch of the common carotid artery and the inferior thyroid artery. The thyroidea ima is a branch of the thyrocervical trunk of the subclavian artery. There is usually a small thyrocervical trunk from which arises the thyroidea ima which anastomoses with the thyrocervical trunk. The veins begin in venous sinusoids which unite from larger and larger veins until three veins are formed which leave each side of the gland. The superior and middle thyroid veins empty into the internal jugular vein and the inferior vein empty into the innominate vein. It should be noted that these veins enter the thorax immediately behind the first rib or second rib and that they lie between the internal and external carotid arteries and the trachea, a point where they may be readily compressed.

The sympathetic chain chiefly enters the deep cervical lymph glands. The secretary and vasomotor nerves served to the gland are for the most part derived from the sympathetic nervous system, although the para-sympathetics also send fibers to it by way of the vagus.

The sympathetic nerves leave the sympathetic chain over the root of the white ramus of the upper five thoracic segments and pass up the sympathetic chain to form synapses with the cells of the superior, middle, and inferior cervical ganglia. From the superior cervical ganglion postganglionic fibers pass to the small internal glosseus, thoracic, external carotid plexus, and finally by way of the superior thyroid plexus to the gland. From the middle and inferior cervical ganglia postganglionic fibers pass onto the esophageal artery from the thyrocervical artery and by way of the inferior thyroid plexus to the gland.

The sympathetic fibers serve to the gland have their cell origin located in the spinal ganglia of the upper six cervical nerves. There is here a possibility of producing secondary osteopathic lesions in the cervical and upper dorsal region on account of vasoconstrictor reflex closing contractions of the posterior spinal root. The osteopathic practitioners in thyroid treatment should be applied to the upper four ribs, to the upper five dorsal and to all of the cervical segments of the vertebral column. All muscular lesions in the neck should be corrected. Local edema and the climacteric should be raised.

Care should be taken not to apply much pressure to the gland itself. Its highly vascular nature should be born in mind and because of the many delicate elaborate networks slight pressure may produce a hemorrhage within the gland.

Are You Interested in the Study of Osteopathy

If so, do you know the cardinal rules of osteopathic progress? The first is a thorough knowledge of your field—the second is being able to think one step ahead of the demands that are made on you.

These call for study. Next fall, the Philadelphia College of Osteopathy will enter its twentieth academic year. It is better equipped than ever to give you the thorough, careful training that your profession demands.

Minimum Entrance Requirement:
The completion of an approved four-year high school course.

This College is enjoying a period of financial prosperity. It contemplates new buildings and facilities. Its laboratories, its clinics, its hospital for student construction, merit your investigation.

The Class for September, 1928, is Already Enrolling

Write for the College Bulletin. Let us answer your questions concerning eligibility for entrance. Address
