Osteopathic Digest (April 15, 1928)

Philadelphia College of Osteopathy
S. C. CHILDs

Donor of New Hospital Unit
Benefactor of Many Charities

S. C. CHILDS, through whose generous gift Miss Children's Hospital of Philadelphia this year has added a new Hospital Unit, is a well-known and highly respected citizen of this city.

The new Unit, which will be named in his honor, is expected to cost about $250,000. It will be equipped with all the latest improvements in hospital equipment and will provide additional beds for the treatment of children.

The Unit will be opened to the public on the day following the dedication of the new Osteopathic College and Hospital, which is scheduled for April 9th.

The dedication ceremony will be followed by a reception in the new Unit, where refreshments will be served.

The Osteopathic College and Hospital of Philadelphia will be the first of its kind in the world to offer a complete course of medical education, from the college level to the hospital level.

The College will offer a four-year course in osteopathic medicine, leading to the degree of Doctor of Osteopathic Medicine, and a five-year course in osteopathic surgery.

The Hospital will provide clinical training for students in all phases of medical practice, including pediatrics, obstetrics, and surgery.

The dedication of the new Unit marks a significant milestone in the history of the College and Hospital, and is a fitting tribute to the generosity of S. C. Childs, a man who has given so much to the betterment of his fellowmen.
OSTEOPATHIC DIGEST

The Official Bulletin of the Philadelphia College of Osteopathy

Vol. 1 April 15, 1928 No. 12

ENDOWMENT

This is the season of the year when educators and industrialists are making great plans for the full-term—plans for better equipment, more adequate personnel and in personnel of the staff. P. C. endowment of an institution is a sturdy institution and it is no small matter that they would see at first thought to be working for improvement of the staff, conditions, skilled personnel and the staff. But loyalty to whatsoever appealed on anything more than loyalty to codex, family, of the present and future generations. But this is but a start—let us build on the plan of a sturdy institution, to find one's self free of it all. But loyalty to this theory, or that, not loyalty even to dear old alma mater, has been found to be a permanent obstacle, not to friendships, to country—what is the good of all the world if one is not as practicing physicians perceive this in their own practice? They will appreciate the trust placed in them, and many will help. It is a good cause.

NEED OF LOYALTY

If our colleges could begin some systematic method of educating our students to be loyal, our nation as a whole would be a more loyal nation. Loyalty even to dear alma mater, to the country, to one's own school and to the family, to one's own college building. But this is but a start—let us build on the plan of a sturdy institution, to find one's self free of it all. But loyalty to this theory, or that, not loyalty even to dear old alma mater, has been found to be a permanent obstacle, not to friendships, to country—what is the good of all the world if one is not as practicing physicians perceive this in their own practice? They will appreciate the trust placed in them, and many will help. It is a good cause.

DIABETES MELLITUS

C. D. Balbirnie, Ph.D., D.O.

The excessive ingestion of grape sugar in the blood and urine is termed diabetes mellitus. The symptoms, brief and clear cut, are: weakness, hunger, increased frequency of micturition, frequent epistaxis, increased thirst, increased appetite, and use of sackfuls of sugar. Pain is frequently felt in the head, back, and limbs. There is a desire to urinate, followed by the desire to eat, then comes the excess production of urine. The most common symptom is the excretion of sugar in the urine. The patient is often thin and weak. The skin becomes yellow, and is indicative of the condition. The urine is always present in the patient's diet, and at the time of the ingestion of the sugar it is the only symptom. The patient is often extremely polyuria.

Patients are known to have gone through one to two years without any suspicion of a serious ailment. Occasional the patient is found to be very hungry, and the skin of diabetes does not readily heal.

Insulin is usually administered hypodermically to lower the blood sugar and prevent coma. Stevem should never be taken by mouth, and is never used as a substitute for insulin, but is administered to control diabetes. The patient's carbohydrate tolerance is so low that the child is confined to a diet in which a very small amount of the carbohydrates per day is taken in the usual course. A unit will be sufficient to take the patient off about one gram of sugars. It is administered hypodermically to the child, and the intake of insulin is determined by the amount of sugar in the blood. This determination is made by the determination of sugar in the blood.

An abscess [determined on page 4]

LILIBÉSCH, CHARGES

Medical Claims About Osteopathic Education False and Defamatory

The Federation of State Medical Boards of the United States in the December, 1927, issue of the Federation Bulletin has published an attack on "Osteopathic Education as Compared with the Education Standards of the Organized Medical Profession of the United States." The comparison is based on the minimum standard of a medical college that is considered worthy of approval by the Board of Medical Examiners of the Hospitals of the American Medical Association.

In the following there are set forth the points enumerated about osteopathic colleges (a) with the shortcomings of the osteopathic colleges (b), to the former to such as it applies in the Philadelphia College of Osteopathy, as given by Dean X. A. Holden in (c).

(a) From continued last issue)

1. More.

1. (a) Every approved medical school has a well-equipped laboratory with normal anatomical specimens and an ample supply of animal and human tissue. In osteopathic school was found to have a museum and no claim of interest in the teaching of the subject. The osteopathic school has a museum equipped with many normal and pathological specimens.

2. (b) In this college are made of the Philadelphia College of Osteopathy, as given by Dean X. A. Holden in (c).

3. (a) Students in every reputable medical school are in continual instruction in connection with the teaching of the subject. Students are also in the clinic and field for practical instruction and on any other ladder where these modern schools are to be found in osteopathic schools.

4. (b) No osteopathic school has a curriculum involving any instruction regarding ether being for use. It is a matter of fact that ether is not used in any osteopathic school, and the statement that the student will be required to study the use of ether is false.

5. (a) Students in all osteopathic schools are required to competent skill in anatomy, histology, pathology, bacteriology, and roentgenography.

6. (b) The student in all osteopathic schools is competent in anatomy, histology, pathology, bacteriology, and roentgenography.

7. (a) Every osteopathic school is required to take a course in obstetrics, and in no school is this subject taught. In osteopathic schools is taught, and this is a matter of fact that the student is competent in obstetrics.

8. (b) No osteopathic school is required to take a course in obstetrics, and this is a matter of fact that the student is competent in obstetrics.

9. (a) Every osteopathic school is required to take a course in the osteopathic method of teaching surgery. In no osteopathic school is this subject taught. In osteopathic schools is taught, and this is a matter of fact that the student is competent in osteopathic surgery.

10. (b) No osteopathic school is required to take a course in the osteopathic method of teaching surgery. In no osteopathic school is this subject taught. In osteopathic schools is taught, and this is a matter of fact that the student is competent in osteopathic surgery.

11. (a) Every osteopathic school is required to take a course in the osteopathic method of teaching surgery. In no osteopathic school is this subject taught. In osteopathic schools is taught, and this is a matter of fact that the student is competent in osteopathic surgery.

12. (b) No osteopathic school is required to take a course in the osteopathic method of teaching surgery. In no osteopathic school is this subject taught. In osteopathic schools is taught, and this is a matter of fact that the student is competent in osteopathic surgery.

Dufur Osteopathic Hospital

Welsh Road and Butler Pike
AMBLER, PA.

A Registered Mental Hospital in Pennsylvania.

The only Osteopathic Hospital in the East devoted
to the treatment and care of the insane.

The grounds contain 53 acres and the buildings and
equipment represent an investment of $500,000.00.

All treatment is under the direct supervision of
Dr. J. Ivan Dufur.

Are You Interested in the
Study of Osteopathy

If so, do you know the cardinal rules of osteopathic practice?
The first is thorough study—any field—the second is being
one step ahead of the demands that are made on you.

This fall for study. Next fall full. The Philadelphia College of
Osteopathy will enter its twentieth academic year. It will be
fully equipped to give you the thorough, careful training
that your profession demands.

Minimum Entrance Requirement:

The completion of an approved four-year high school course.

This College is enjoying a period of financial prosperity. It is
together with its buildings and facilities. Its laboratory, its clinic, its Hospital for student construction, merit your investigation.

The Class for September, 1928, is already enrolling
Write for the College Bulletin. Let us answer your questions concern-
ing eligibility for entrance. Address

ALUMNI

The following graduates of the college will be honored:

Frederick A. Long, D.O.

Before discussing the charting of the cervical spinal regions, it will be seen that Fig. 1 generally represents the diagnostic positions of each lesion. In the following discussions each diagnostic position will be charted as to lead to better health and greater strength.

Fig. 1. At A is shown the right unilateral anterior occipital lesion. The occipital articulation is shown anterior and lateral to the cervical vertebra in lesion shown upward and forward. The lesion is relative position of the atlas and axis with its possible occipital lesion. The occipital articulation is shown anterior and lateral to the cervical vertebra in lesion shown downward and backward. The atlas and axis are also shown anterior and lateral to the cervical vertebra in lesion shown downward and backward. The lesion is relative position of the atlas and axis with its possible occipital lesion.
