One hundred and twenty-five freshmen, representing seventeen states and two foreign countries, matriculated at the Philadelphia College of Osteopathy, the ladies representing forty-seven of the states and two foreign countries.

Sixty-eight College Men and Women Among Matriculants

The thirty-fourth opening exercise of the Philadelphia College of Osteopathy was held Tuesday, September 20, at 9 A.M., in the gymnasium of the Philadelphia Boarding House. The new student enrollment amounted to 121, of whom sixty-eight were osteopathic students. The new student group met on Wednesday afternoon, in the presence of a large number of the faculty of the College, the directors of the Philadelphia Boarding House, the boarders, and the friends of osteopathy. The new student group was interviewed by Drs. Benjamin Gross, Dr. Herman Trudell, and Dr. Leo Wagner.

The principal speaker was Dr. O. J. Snyder, former president and founder of the Philadelphia College of Osteopathy, now President of the New York College of Osteopathic Medicine.

Dr. Snyder's speech appears below. It is an inspiration to the rest of the students to believe that the new group of students have no other choice but to do the work to their best advantage.
The political season is on. My hat is in an apartment, the woman's hat is on the kitchen table. Get up! My political situation at present is bad. Perhaps another. I'm coming forth on a thin financial support and it is a party! Nevertheless, my hat is in another. Let us consider another. The report of the Board of Directors at its Annual Meeting answers this question. What price Registration? This question must be answered without unnecessary delay.

The Board's Favorable Report

The Philadelphia College and the Hospital conducted a three years' program for its budget program. Just where time, appeals and requests for additional monies have been made to the profession to enable the institution to carry on during the difficult period of the depression. Just where have all these enterprising movements led to? How is the situation at the College and Hospital at this particular time?

The report of the Board of Directors at its Annual Meeting answers these questions in no uncertain terms. Capital reductions, balanced budgets, lower operating costs, increased enrollment, and financial stability have characterized the current year. This is the seventh year of continuous profit. The School of Training at the Osteopathic Hospital is still unanswered. Science has, so far, contributed nothing to the solution of the symphysis fracture, a condition that a description of the symptoms of the condition of the patient might be important.

Although the exact cause of a cold is still unknown, it is believed that a common cold is caused by a virus. Overindulgence in alcoholic beverages and lack of fresh air and sunlight are known to be a contributing factor. Treatment is usually symptomatic, with rest and analgesics such as aspirin or acetaminophen being the primary medications used. However, the most effective treatment is to prevent the cold from occurring in the first place.

The Osteopathic treatment of infantile paralysis involves a multi-disciplinary approach with particular attention to the prevention of joint contractures and muscle atrophy. Early intervention is crucial to maintain the patient's motor function and prevent secondary complications. The patient is placed on a prone or supine position depending on the severity of the paralysis to prevent contractures. Physical therapy, including range of motion exercises, is essential to maintain joint mobility and prevent muscle atrophy.

Local Anesthesia in the Treatment of Fractures

By D. S. Pemnock, M.D., D.O.

A fracture is a break in the struc-
tural integrity of a bone. Whether or not the line of fracture goes on to heal depends on a variety of factors, some of which are not always complete, there is usually some deform-
ity which is evident. This deformity is
dependent primarily on two factors. First, the forces present at the time of injury and secondly, the displace-
ment of the fragments. In the presence of a false joint there is an interrup-
tion in continuity of the bone which may occur in two ways: either by a compression of the broken bone, or by a projection of the broken bones, which increase the forces present producing local hemorrhage. The injury to the tissues produces a sensory reflex, which pro-
duces contraction of the muscles of the part giving rise to the secondary im-
portant element producing the deformation. With the deformity of a fracture and deformity made, the important step in the treatment of it is the purpose of this article to speak about this point.

In reduction due to pain, an an-
testhesia is often necessary. This can be done in several ways.

- **Local Anesthesia**

  - Use of a local anesthetic, such as lidocaine, and then gently positioning the bone back into place.
  - Use of a block anesthetic tonum in the area of the fracture, which will numb the area and allow for easier manipulation.

- **Regional Anesthesia**

  - Use of an epidural or spinal anesthetic to numb the area of the body where the fracture is located.
  - Use of a peripheral nerve block, such as a brachial plexus block or a femoral nerve block, to numb the limb or leg.

- **General Anesthesia**

  - Use of an IV sedative and muscle relaxant to provide a fully anesthetized state, allowing for the most precise reduction.

Reduction of the deformity.

In the case of a fracture, the deformity is usually evident and can be palpated. The goal of the reduction is to place the bone back into its normal anatomical position. This is typically done under the guidance of a radiologist, who will use fluoroscopy to visualize the bone and ensure that it is properly reduced.

- **Closed Reduction**

  - Use of closed reduction techniques to gently manipulate the bone back into place without the need for surgery.
  - Use of an external fixator to provide temporary stability until the bone heals.

- **Open Reduction**

  - Use of an incision to approach the bone and allow for direct visualization and manipulation of the bone.
  - Use of a plate and screws or other internal fixation devices to stabilize the bone.

- **Hydroxyapatite**

  - Use of a hydroxyapatite cement to fill the gap between the bone fragments, allowing for easier reduction and stabilization.

- **Postoperative Management**

  - Use of analgesics to manage pain after the reduction.
  - Use of sterile dressings and compression to prevent swelling.
  - Use of early mobilization exercises to promote healing and prevent stiffness.

- **Complications**

  - Infection
  - Nonunion
  - Malunion
  - Delayed union

Reduction of the deformity is an important step in the treatment of a fracture, as it sets the stage for proper healing and function. It is important to ensure that the bone is properly reduced to prevent complications and ensure the best possible outcome. It is always recommended to consult with a healthcare professional for the best course of action in your specific situation.
ATHLETICALLY YOURS

By Dr. Francois d’Eluieu

Aldo Nul Freshman! Welcome to a real live college with an osteopathic spirit and a co-operative family. You will find your work everlasting, but play forever very tentative.

Glad to announce the return of our coach, Allie McMillion, one of the best basketball mentors in that sport. Allie will be the floor coach and it is up to the floor coach to turn the school spirit on the floor of Jackson and Moyle (at Sixteenth and Spruce Streets), knowing how to fit you in a real suit and that new suits from now on are a true team as well as a true team.

Poor cows were driven from their territory.

Have you sent your subscription to the Osteopathic Digest? This privilege means free Swimming (every clay and every night); Electric Massage for Demonstration with "The House With a Million Friends" (at 1610-1612 Chestnut Street). Your subscription fee is ten dollars. Enter Allie McMillion and Specialty in the book.

Shoe-store at all times. Have you interested yourself in your class activities?

Y. L. C. A. privileges will again be free to every student in this college. Last year over 600 a month took advantage of the Y. L. C. A. privileges, and a majority of the students worked in the Y. L. C. A. The privilege means free New York Public Library, Y. M. C. A. Gymnasium, Hand Ball Lockers. Hot Showers, Free hot Lunch (in Phelps’ Dining Rooms); and a congenial group of workmen ready to help every student have a good time. Take advantage of this privilege.

It is worth their while.

The Faculty Golf Tournament was furnished plenty of surprises. The most exciting incident of the entire eighteen-hole battle of the century was the suffering of some more scores in the first nine paragraphs, who never collected in even one yard so much as a "golf club" with which to drive the ball. However, this is just legal and very fine.

"Success for all" is the slogan, and if you are not interested in teams but would like to see a good game of ball and tennis, or a real workout followed by a hot meal, the showers and the rest, well, get your roof from this office today and take advantage of your athletic privileges.

Coach Cog. Gibson became so well acquainted with both our students and the rest of the college, that at every appointment with Dr. B. S. B. P.nombre, students, faculty, and visitors were clamoring for an appointment. George Gibson will be back as baseball coach and will also assist in basketball. Our assistant baseball coach, R. A. Chambers, held St. Louis Cardinals last month in five scattered games and beat the big batters, 3 to 0.

Here is hoping that the inter-fraternity basketball tilt this year will bring out another new style in "winning." This class and fraternity teams earned a reputation last year. Get one "winning" this year. More to come.

Miss Doris Good, secretary, "Sec.," is now in the college office and has nothing to do with schedules, fees, received money, and general information. She has been promoted to new "Green" territory.

The inter-class tennis tournament will be the first recreational activity to be started as part of the college program. "Captain "Bill" Christian" and the variety team will take charge of the playing and the competition.

Dr. W. Whittaker told me con- fidentially that the members of the Golf Tournament was because he had taken the best of lessons from the "pes" at Mablet Golf Course the work between 10:00 and 6:00 P.M. The poor cows were driven from their peaceful pasture on a cool, wet rainy day.
