Introduction
I am a Third Year Undergraduate Student at Kutztown University; my major is Graphics and Advertising Design.

During this past Fall semester, in my Intro to Photography class, there was an assignment to create a photo essay. Anything that tells a story would be acceptable. Guidelines were provided that we were encouraged to follow but were not mandatory such as shooting a large group, head-shots, sequence of steps, and more. Since I am fortunate enough to have my dad work at PCOM, I thought it would be cool to show a day in the life of an osteopathic medical student!

Methods
On November 3, 2016, I visited the campus to explore opportunities for my project. The camera I used is my Canon EOS Rebel T5.

I took many pictures of the library, a computer study area, the Osteopathic Manipulative Medicine (OMM) lab, Clinical Learning Assessment Center where simulations were conducted, and then the Anatomy Lab

Results
My presentation follows a sequence from obtaining information in the library and a computer lab to learning skills necessary for a physician in OMM and simulation labs to exploring the anatomy to learn deep details of the body structure.

My grade for this project was an A.

Conclusion
I presented a photo essay of one day in the life of an osteopathic medical student.

Acknowledgements
I appreciate the assistance of Dr. Denah Appelt, Dr. Arthur Sesso, Dr. Joseph Georges, Dr. Donald Allison and Dr. Michael McGuiness, & I thank them for giving me permission to do my chosen assignment.
